

Nobili Antiqua Tap Installation Instructions

The Nobili ranges of Twin Lever Mixers are European Standard with the Handles in the horizontal position being off.

Should you desire the handles to be in the vertical position as off, then ask your plumber prior to installation to dismantle the assembly and change the quarter turn mixers over from side to side.

Please read the following instructions to assemble the tap head correctly.

At the back of the tap body there is a grub screw, which must locate in the Grey locating ring notch when fitting the swivel tap head into the new body assembly.

The silicone grease in the new mixer body is to be removed and applied to the "O" rings and seal of the swivel head.

The grub screw must locate into the notch of the grey ring and NOT in the slot.

Should you or the installer have any queries or issues, do not hesitate to contact our office by any of the following:
